To Whom It May Concern:

It is my privilege to recommend **Darius Quick**, who will graduate this December with a Bachelor's in Computer Science, specializing in software engineering. Since joining my team at Johns Hopkins Care at Home in 2018, Darius has excelled in a fast-paced, detail-oriented environment, consistently demonstrating the problem-solving skills, technical thinking, and collaborative mindset that will make him an asset in the technology sector.

Darius quickly masters complex systems, identifies inefficiencies, and implements effective solutions—skills directly transferable to software development. He is adept at translating technical and procedural information clearly for diverse audiences, an ability that will serve him well when working with cross-functional teams. His commitment to accuracy, process improvement, and user experience has earned him consistent praise from both colleagues and clients.

Balancing a full-time role with the completion of his degree reflects Darius's exceptional discipline, resilience, and drive. He thrives under pressure, adapts to evolving challenges, and approaches every task with professionalism and integrity.

Any organization would be fortunate to have Darius on their team. He combines the precision and analytical skills of an engineer with the communication and teamwork of a seasoned professional. I recommend him without hesitation.

Sincerely,

A handwritten signature in cursive script that reads "Lauren Pizzi".
